PROJECT HIGHLIGHTS

Backend@Dotfile.....Feb. 2021 - Ongoing

Self hosted at-home Kubernetes cluster github.com/dotfilesh/ops

- Follows GitOps best practices; declarative IaC yaml reconciled through FluxCD.
 - Uses modern practices in SRE, easily translated into production environments.
- Hyperconverged infrastructure for all my cloud services.
 - SSO via Authentik, Media streaming via Jellyfin, File hosting via NextCloud. Metrics via Prometheus visualized via Grafana. Block/S3/File storage via rook-ceph
 - Plans to add GitLab for Git, project management, CI/CD. Other services in the near future.
- Runs atop five nodes at one site; designed for infinite scalability.
 - Talos immutable Linux - easy maintainability for clusters from a docker container to massive datacenters.
 - Services used designed to be configured to run easily across multiple datacenters.

AurumBot.....Jun. - Jul. 2018

Modular Discord bot in Go *(no longer functional following API changes)* github.com/whit-colm/aurumbot-core

- Designed for easy self-hosting
- Commands are added through Go's plugin module
